이곳은 우리 민족의 고향입니다. 하지만 안대
공작의 눈을 뜨고 보면 숨겨져 있습니다.
우리는 결코 안대공작의 손아귀에 걸리지
않고 계속해서 우리 민족의 보람과 영광을
향하여 나아갈 것입니다. 94. 8. 3. 단양사. 가. 100
조선인민군총사령관 김일성

We the People

insure domestic Tranquillity, provide for the common Defence
and our Posterity, do ordain and establish this Constitution

竹石图

The final rotation is started off energetically in the direction of the intended turn. The upper arm and shoulder are distinctly swung forward thus giving power to the rotation.

The rotation is passed on to the ski by temporary blocking of the legs.

The arms follow through together with the torso and shoulders. This part of the rotation should be carried out very smoothly with the arms now going in a forward direction to avoid rotation into the fall.

uphill

Example of the execution of uphill, stop and downhill skilifts.

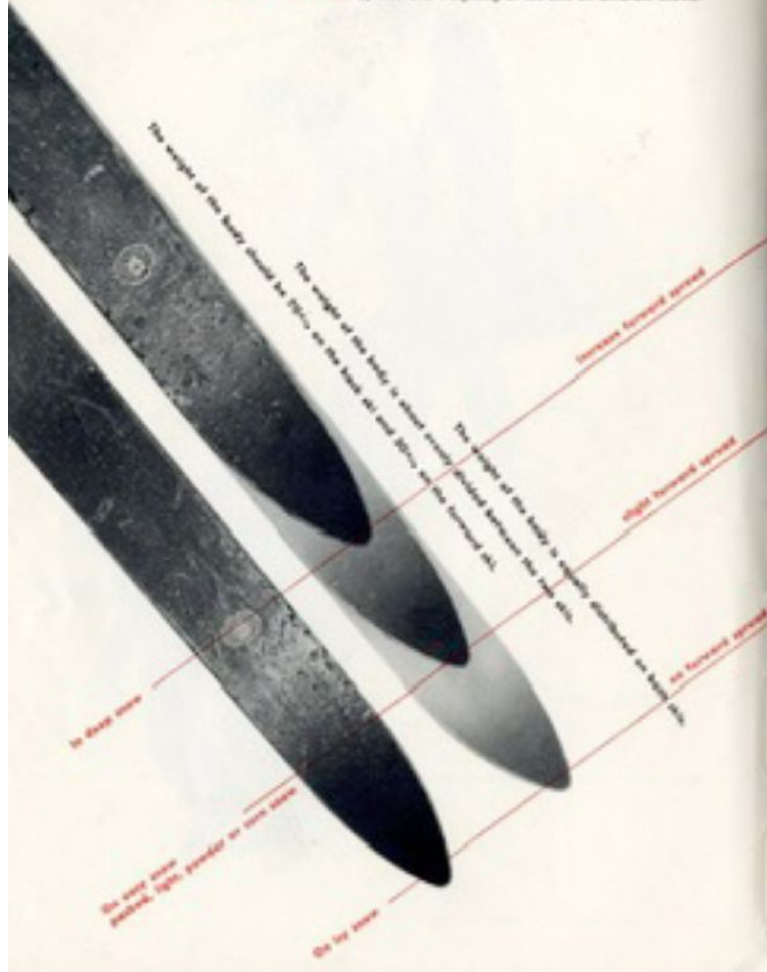

THE CHRISTMAS

uphill

downhill

STRAIGHT DOWNHILL. Spread and weighting of the ski on different snows.

Lateral spread of the ski on different snows

STRAIGHT DOWNHILL. Backward and forward lean

LEAN: The body is ahead of an imaginary line vertical to the skis and which passes through the ankles of the skier.

normal on gentle slope forward lean on steep slope

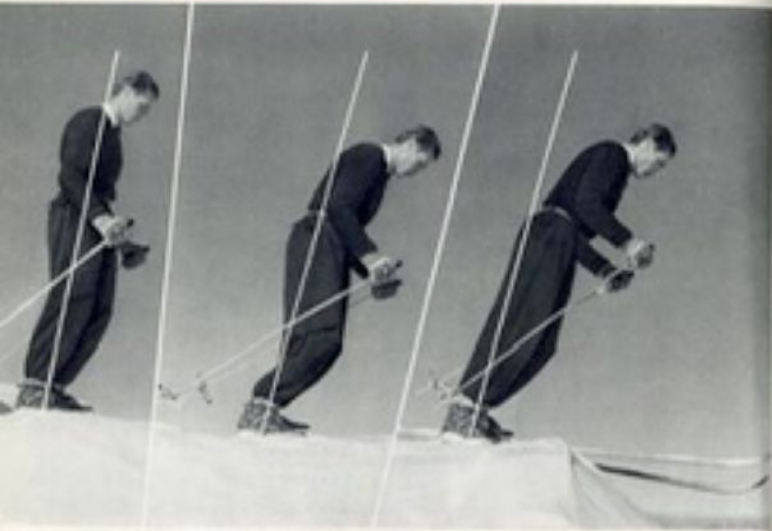

forward lean is obtained by the forward bend of the pelvis and the upper body.

bad posture correct posture

Backward lean. The body is behind the perpendicular going to the bending of the knees.

STRAIGHT DOWNHILL. Change of slope.

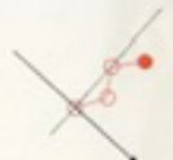

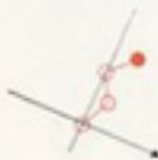

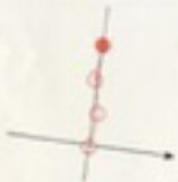

In anticipation of a steepening of the slope ahead, the skier shall prepare by taking up a forward lean suitable to the anticipated slope.

STRAIGHT DOWNHILL

Positions according to the grade of the slope.

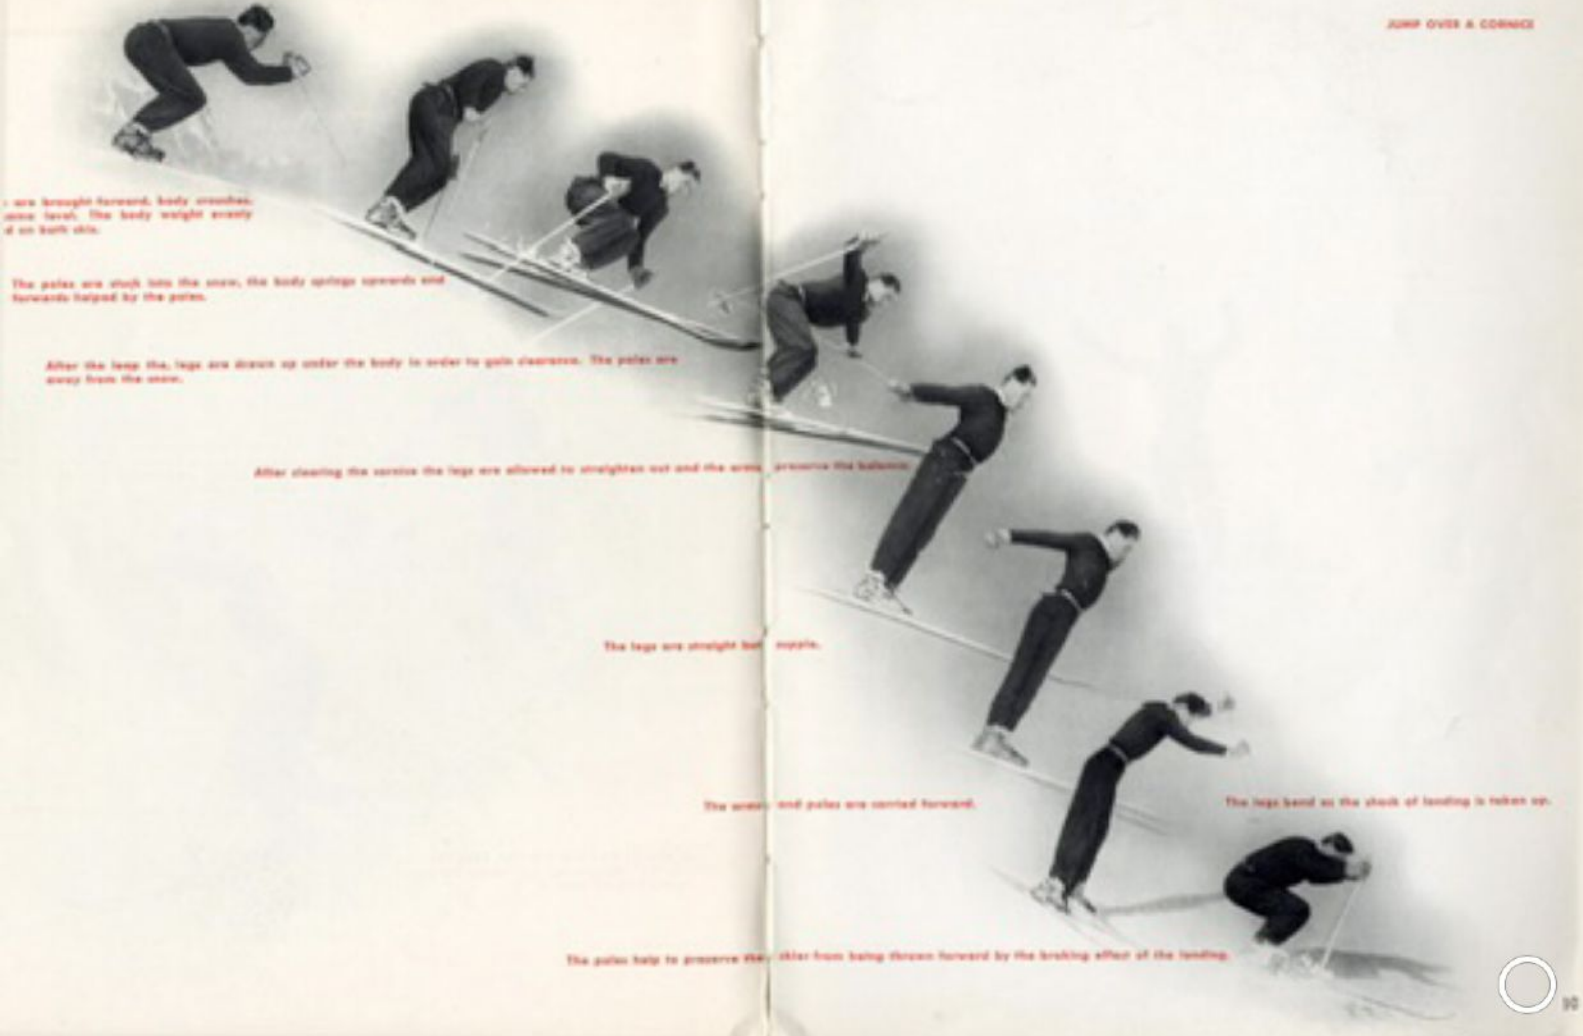

1. POSITION ON GENTLE SLOPE. The body is slightly of an imaginary line which being perpendicular to the slope, passes through the ankles of the skier.

2. POSITION ON MEDIUM SLOPE. The body is more bent and the hands are further forward.

The weight of the body rests on the ball of each foot.

3. POSITION ON STEEP SLOPE. Greatest possible forward bend of the ankles and upper body.

The poles are stuck into the snow, the body springs upwards and forwards helped by the poles.

After the leap the legs are drawn up under the body in order to gain clearance. The poles are away from the snow.

The legs are straight but flexed.

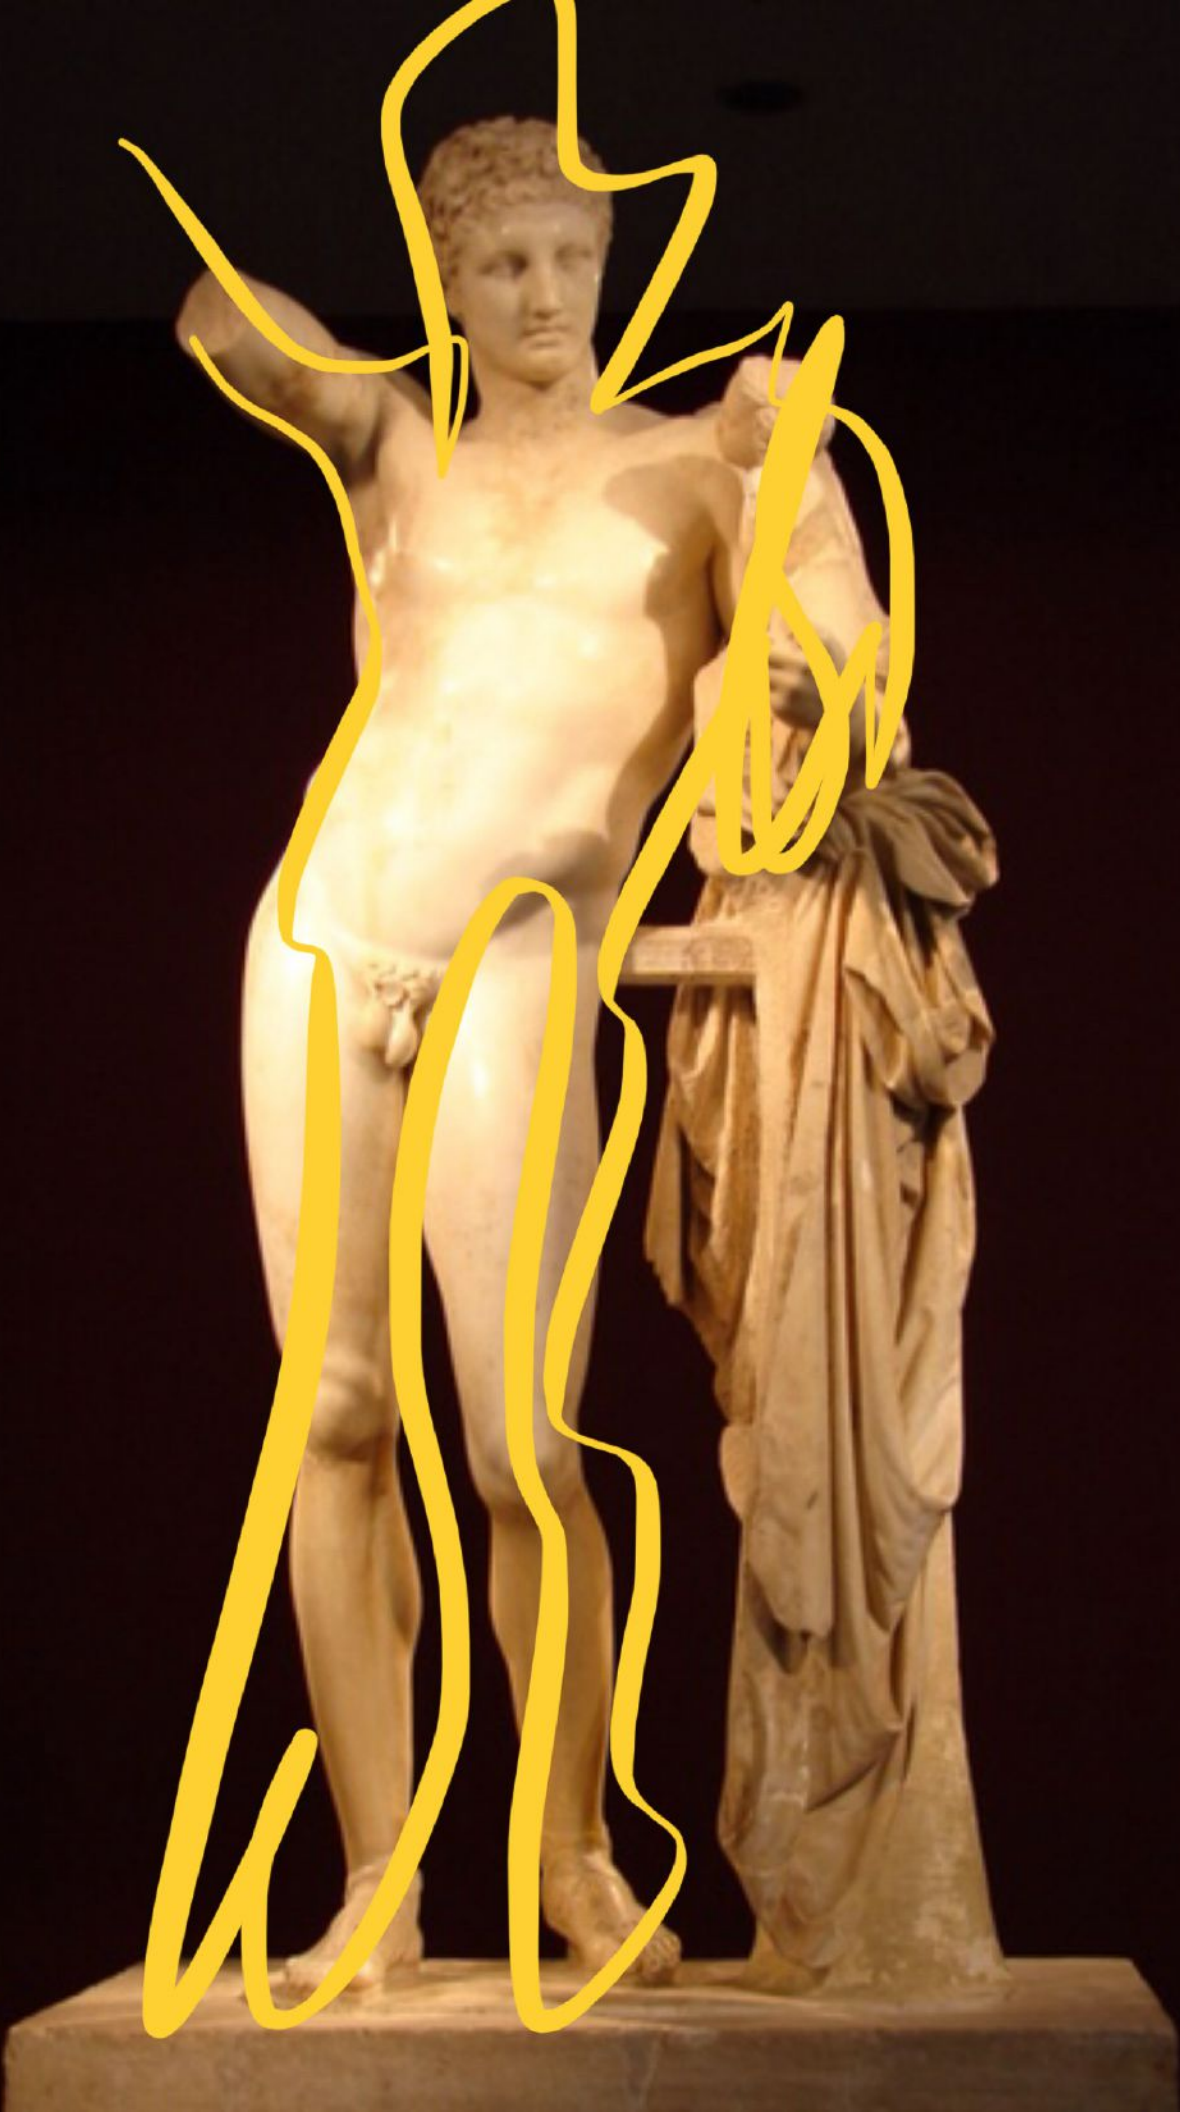

The arms and poles are carried forward.

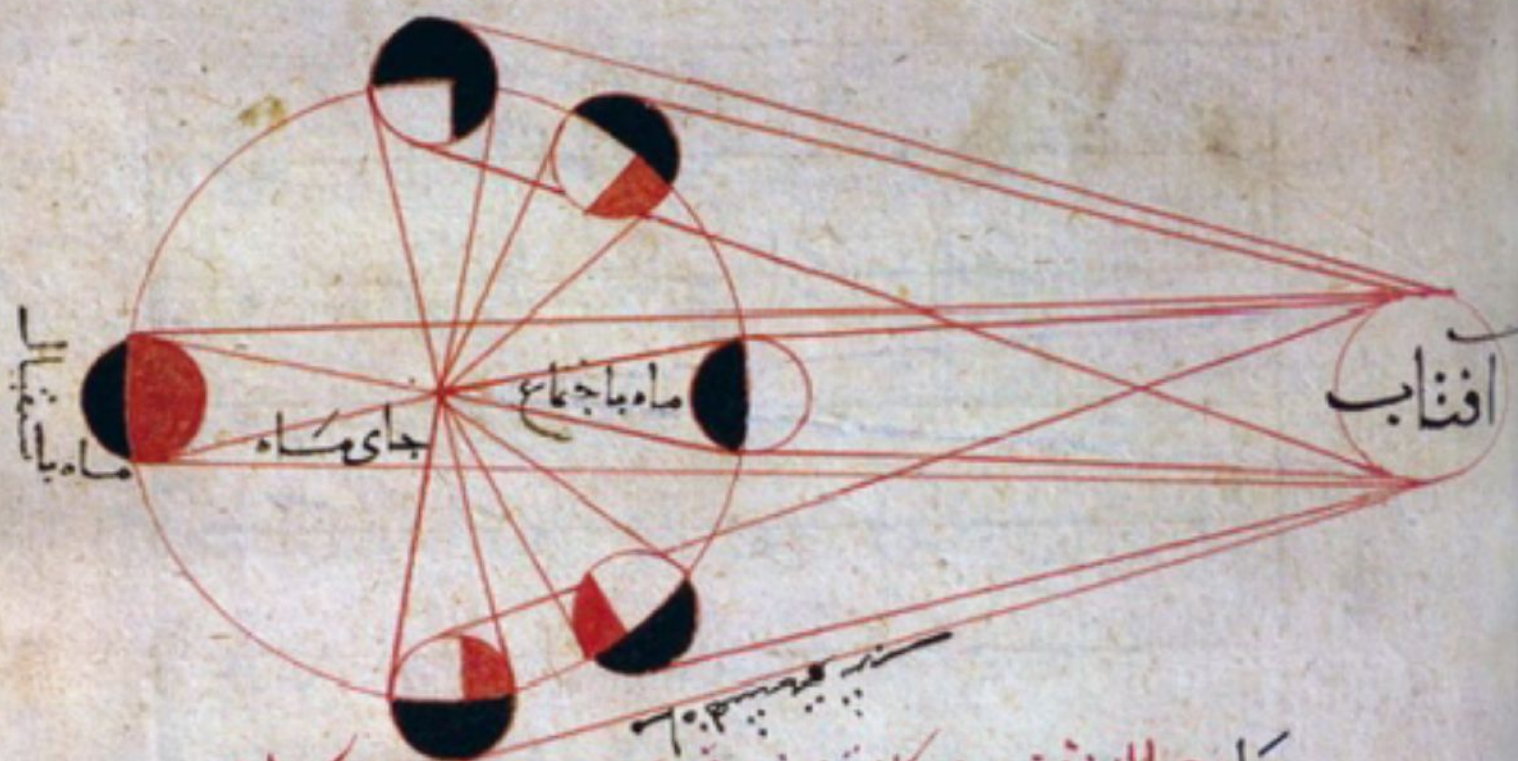

The legs bend as the shock of landing is taken up.

The poles help to preserve the skier from being thrown forward by the braking effect of the landing.
