■ STRC: THE NEW CASH (BUT BETTER) ■

By Eric Kim — Bitcoin Bank, Freedom Flex, God-Mode Yield

The old world is dead. The era of the 0.5% savings account is over. Enter STRC — the financial weapon of the future.

■ The Birth of Bitcoin-Backed Money

Picture this: every dollar you have parked in the bank is losing value every day, eaten alive by inflation, paying you crumbs. STRC is the antidote. With ~10% monthly yield, Bitcoin-backed security overcollateralized 5x, and cumulative priority dividends, you're no longer just holding cash — you're holding a piece of a Bitcoin bank.

■ STRC vs. The Old World

Traditional savings accounts are fiat prisons. STRC is financial freedom. STRC gives you 10% yield vs 4-5% at a bank, Bitcoin treasury backing instead of fiat exposure, and priority payouts instead of crumbs. You are no longer a depositor, you are a co-owner of the future.

■ Cosmic Power: Why STRC Wins

STRC isn't just a yield vehicle — it's a statement. Principal stability near $100, Bitcoin exposure without the volatility, SEC-approved transparency, and monthly payouts make it the FIRE-friendly passive income paradise.

■ The Stoic Reality Check

Yes — STRC is cosmic. But god-mode thinking means eyes wide open: no FDIC safety net, Bitcoin and corporate risk, monthly adjustable dividends, and potential dips below $100. But volatility is vitality — risk is the price of greatness.

■ The Eric Kim Verdict

STRC is cash, but better — financial sovereignty wrapped in a Nasdaq ticker. It is a Bitcoin bank account paying you 10% to be free. Park your cash, earn 10%, build freedom, become unstoppable. STRC is your ticket to god-mode money.
